SOFTWARE

- pybdiff
Python replication of Stata's bdiff command. Tests whether regression coefficients differ across two subgroups via permutation, bootstrap, or Wald tests, with optional parallel execution. Install via `pip install pybdiff`.
- pyshapley2
Python replication of Stata's shapley2 command. Computes the Shapley–Owen decomposition of any regression fit statistic across independent variables or user-defined groups. Install via `pip install pyshapley2`.
- pybacondecomp
Python replication of Stata's bacondecomp command. Implements the Goodman–Bacon (2021) decomposition of TWFE DiD estimators into all 2×2 comparisons. Install via `pip install pybacondecomp`.
- jrnl.daily.com
An automated economics literature platform that aggregates new working papers and journal articles daily, with AI-generated summaries and cross-language search.
